Full Name: VALDEZ, Cheyenne M.

Nickname: Shai

Age: 20 years old

Birthdate: November 22, 2002

Senior High School Graduated From: Asia Pacific College

City the High School is Located at: Makati City

Course: Bachelor of Science in Information Technology Specialization in Mobile and Internet Technologies

Scholarship: Yes, 50%. Public School Graduate (SHS scholarship retained up until college due to me graduating from a public junior high school: Pasay City National Science High School)

Transferee/Second Course: I had started my undergraduate studies at Asia Pacific College

Did you choose this course? Yes, although it's kinda like a second choice to me since BS EMC Specialization in Game Dev wasn't available

Why yes? It's something I'm familiar with especially since my brother graduated with the same degree albeit with a different major (game development)

I.T. Experience: Programming, Gaming, Website/App Project Making

Hobbies/Interests/Libangan: Fitness, Music, Food, Hanging Out, Gaming, E-sports

Goals in Life: I honestly want to live to see the day that I genuinely want to live. I have mental health issues, thus, it's hard for me to think of or have convenient life goals especially in the long run.

What do you expect to learn from this course? Of course from the name itself I would expect to learn about web programming. Based from previous experience (and if I'm thinking about this right) I think I would expect to learn more about JavaScript and other languages(?) used for website back-end purposes. My genuine expectation would be for this course to be hopefully easy to learn since I associate anything website development-related with bad memories since I had a hard time learning about it during the pandemic (which is I evade website projects).

What do you want to learn to help you in your chosen major? To be honest, I'm not really sure. Since my major is Mobile and Internet Technologies, I'd expect to want to learn about Web Programming that is mobile-supported, and accommodates common internet problems.

Any other interesting aspects of your life that you would like to share:

- All my life I believed I was going to pursue a course under the pure sciences due to my academic background throughout the years
- I am an abuse victim, I have undiagnosed mental issues, and I need professional help (more concerning than interesting)
- I sometimes get understimulated or overstimulated. Either way, it affects my learning which is why sometimes you'll see me engaging with other things during lessons or I would be having a

hard time picking up what's being taught (hence a lot of questions asked or maybe being too overwhelmed to know what I don't know). Either way, it doesn't mean I don't want to learn. I'm trying.
- I have suspicions that I may be on the spectrum
- You can use any pronouns with me and refer to me using any honorific
- I crack jokes just to keep myself engaged. Everyone else laughing along is just a bonus
- I have tattoos
